Tetanus.....	1
Total deaths from all causes.....	116

The clinical history of the so-called case of "borras" fever at Trinidad, upon the south coast of Cuba, has been received since my last report. The patient, a boy aged 11 years, had one remission in temperature the beginning of the fourth day, black vomit, bloody stools, and death upon the sixth day of the disease.

No suspicious cases of yellow fever have been officially reported in Havana during the week, and all nonimmunes from foreign infected ports are being efficiently detained by the Cuban quarantine service, upon the lines inaugurated by the Public Health and Marine-Hospital Service.

Respectfully,

A. H. GLENNAN,
Surgeon.

The SURGEON-GENERAL.

Reports from Matanzas, Cardenas, Isabela de Sagua, and Caibarien.

MATANZAS, CUBA, June 30, 1902.

SIR: Through Surgeon Glennan, Havana, Cuba, I have the honor to submit herewith the following report for the week ended June 21, 1902:

Matanzas.—Fifteen deaths are recorded for the week, making the annual rate of mortality 16.02 per 1,000. The following causes of death are given: Enteritis, 2; nephritis, 1; meningitis, 1; tuberculosis, 1; pleurisy, 1; tetanus, infantile, 1; broncho-pneumonia, 1; arterio-
